

1918.

WESTERN AUSTRALIA.

Quarterly Statistical Abstract

(The preliminary figures published in this Abstract are, as far as possible, revised every quarter. Those which appear in this issue consequently supersede any contained in previous issues.)

No. 208.

To 31st December, 1917.

Compiled from Official Returns.

S. BENNETT, F.I.A.,
Acting Government Statistician.

PERTH:

BY AUTHORITY: FRED. WM. SIMPSON, GOVERNMENT PRINTER.

1918.

C O N T E N T S

W E S T E R N A U S T R A L I A

N O T E S.

The object of the publication of this "Statistical Abstract" is to furnish each quarter, in a handy and compact form, the latest Official Statistics in connection with those special subjects in regard to which Politicians, the Press, and the Public usually require early and reliable information.

The assistance of the following Government officers, who kindly supply the figures for the respective branches under their supervision, is gratefully acknowledged : The Commonwealth Statistician, the Collector of Customs at Fremantle, the Secretary to the Immigration Department, the Under Treasurer, the Governor of the Commonwealth Savings Bank, the Manager of the State Government Savings Bank, the State Commissioner of Taxation, the Under Secretary for Mines, the Under Secretary for Lands, the Divisional Officer of the Commonwealth Weather Bureau for the State, and the State Chief Electoral Officer.

S. BENNETT,
Acting Government Statistician.

Government Statistician's Office,
Perth, Western Australia,
22nd January, 1918.

THE STATE OF WESTERN AUSTRALIA.

(AN ALMANAC FOR THE YEAR 1918).

XIV.—METEOROLOGICAL STATISTICS.

No. 37.—Notes on the Rainfall of Western Australia for October, November, and December, and Year 1917.

October.—The rainfall during the month of October was, for the most part, somewhat above the average. In a few localities in the Eastern and Midland agricultural areas excesses of an inch were recorded, whilst the heaviest total fall in the State was 6.77 inches at Jarrahdale (3.25 inches above the average). At the same time several extensive districts received a lighter fall than usual. These included the greater part of the West Gascoyne and Fortescue, the lower half of the Great Southern agricultural areas, portions of the South coast, and a large part of the South Coolgardie fields.

The bulk of the month's rain fell in connection with two disturbances, which set in on the 1st and 10th respectively. Both had their origin in the Tropics, but the former was productive of rain only in sub-tropical areas, while the latter affected parts of the Nor'-West as well. The rains lingered for several days in South-West and Southern areas, but the two storms were separated by a fine spell of four days' duration.

The latter half of the month saw the passage of four depressions in quick succession, but their rain-producing potentialities were of a low order, and the month concluded with a week's spell of dry weather, characterised by mild heat wave conditions.

November.—The November rainfall was, for the most part, very scanty, but thunderstorms were frequent in the Kimberleys, where most of the stations registered excesses above normal. At Turkey Creek the month's fall totalled 7.26 inches (5.23 above the average). Scattered thundershowers visited the Pilbara, and parts of the Shark Bay and Peak Hill districts towards the end of the month, and small excesses resulted in some cases. The only other rain worth mentioning fell on the 17th and 18th, over the greater part of the Goldfields and Eastern agricultural areas. In the majority of cases the small average for the month was largely exceeded.

Outside of the above-mentioned localities, a practically rainless month was experienced.

December.—In the Kimberley, over the greater part of the Goldfields, and in West and South-West and Southern coastal areas, an excess in the month's rainfall was shown, elsewhere a slight decrease was met with. In the Kimberley the excess ranged from about half an inch at Hall's Creek to over six inches at Wyndham. The chief factor was the cyclonic storm which appeared South of Timor on the 18th. It was confined within rather narrow limits embracing the coastline from La Grange Bay to Derby. Further South as far as Condon, and inland to the other Kimberley stations and Marble Bar and Nullagine, only light rain was recorded, but on the portions of the coast above-mentioned both fierce gales and heavy rains were encountered. At La Grange the storm commenced at 1 p.m. on the 19th and lasted until 4 a.m. on the 20th. At 3 p.m. on the former date the barometer there stood at 29.12 inches, while at Broome 29.29 was registered, with a strong gale blowing. Derby at the same hour reported a hurricane from the North-West.

Over the Goldfields the excesses were due to thunderstorms, chiefly on the 8th and 9th, which also affected the Midland country and to a lesser extent the agricultural districts.

The excesses in the coastal areas were mainly the result of the somewhat unusual storm for the time of year, which suddenly appeared off the Leewin on the 18th, bringing more or less general rain, with very rough coastal weather.

Year 1917.—The rainfall for the year 1917 was remarkable in many respects, especially throughout the South-West quarter and a portion of the West Kimberley. The annual average was practically everywhere exceeded, and two months in particular, March and July, rank as the wettest on record in the South-West and South and agricultural districts. On the South-West coast very heavy gaugings were recorded. At Jarrahdale the yearly fall was 85.40 inches (40.88 inches above the annual average), and at Karridale, 78.16 inches (32.88 inches above). Many stations in the same area registered 20 inches or more in excess of the average. Over the Midland districts the falls were from 10 to 16 inches above normal, while the Eastern and Great Southern districts registered excesses ranging from 5 inches at Dumbleyung to 15 inches at Toodyay. Along the whole coastline South from Northampton and throughout the agricultural districts the totals for 1917 were, in the majority of cases, the heaviest on record.

Turning to the Goldfields, pronounced excesses were again encountered, apart from a few isolated Northern stations, where the normals were barely exceeded. Compared with the average, the fall for the year at Yalgoo was 8.72 inches above, and at Southern Cross 7.16 inches above. The Goldfield totals, although unusual, were not records. The rainfall for the year 1915 was, in most instances, considerably heavier, and in some localities the 1917 figures were exceeded on other occasions as well.

Substantial excesses were also registered throughout the Gascoyne and Tropics, except in isolated cases. Turkey Creek and Port Hedland recorded small and moderate deficiencies respectively, while at Winning Pool less than half the usual rainfall was measured. The gauging, 5.23 inches, was 5.85 inches below the average, and at this station the year was consequently the driest on record except for 1912. On the other hand Broome recorded an excess of 18.00 inches, and Derby one of 23.51 inches, and the annual totals at both stations have been exceeded only once.

The phenomenal rainfall in the South-West quarter of the State was mainly due to the very heavy winter rains. From the last week in May until the third week in October rain-bearing disturbances passed over these districts in rapid succession. The falls for each of these months were heavily in excess, and those for July, in the vast majority of instances, were by far the heaviest on record for that month. In addition

to the winter rains, disturbances of summer type brought more rain than usual in April and the early half of May, while the March totals, like those for July, were unprecedented in the rainfall annals of the State. The summer months were, on the whole, dry, but December brought some heavy rain to the West and South-West coasts.

On the Goldfields the early summer months were very dry, while the winter rains penetrated to the interior only in a partial fashion. The final quarter was, however, somewhat wetter than usual, and the excessive March rains affected practically every portion of the State.

In the Kimberleys the registrations during the first and last months of the year were responsible for the excesses. From 4th to 8th January, a "willy willy" brought very heavy rain to the districts around Derby and Broome. The former station recorded 31.62 inches, and the latter 32.56 inches for the month. These totals are practically unique in the rainfall records for this State.

On 20th December another cyclonic storm affected the same locality. The Nor'-West and Gascoyne also owed their heavy annual totals largely to the operations of two "willy willies" in March, which subsequently affected the sub-tropical portions of the State.
